

# HCL Domino

## v11: Key Features and Benefits

HCL wants to protect your application investment in Domino and prove it's the smart choice for future low-code app-dev decisions. This newest version, v11, represents a major milestone in HCL's commitment to the Domino application platform to transform over 10 million enterprise-grade apps powering business for more than 15,000 customers and the next generation of solutions.

Here are the significant capabilities you can expect with this latest release:

Feature	Benefit	Business Value
<b>APPLICATION DEVELOPMENT</b>		
<b>Build apps 60-70% faster. (H1 2020)</b>	Anyone in IT can build web-based data capture forms and workflows using data from Excel, SharePoint, multiple data sources, or from scratch.	Add a low-code tool to your IT team's arsenal on a secure platform you trust with HCL Domino Volt available for v10 and v11.
<b>Go mobile with zero-effort.</b>	Existing HCL Domino applications now run on Android and iPhone with zero effort with HCL Nomad.	Same apps, great security, and offline capabilities — now available on mobile.
<b>Imagine new solutions from database push notifications.</b>	Get notified of real-time changes in your Domino environment using the new Event Publisher.	Database push notifications become mobile alerts, they can trigger new processes, and create new elastic search and compliance solutions.
<b>Faster view search performance 2-4X faster.</b>	2-4X faster view searches, compared to v10. Plus, DQL leverages full-text search for 100X faster results with the new Contains operator.	Find documents using a single DQL query rather than writing thousands of lines of LotusScript code.
<b>EASIER ADMINISTRATION AND MANAGEMENT</b>		
<b>Enterprise authentication and access simplified.</b>	Eliminate inconsistencies and manual employee additions and updates with Microsoft Active Directory and Domino Directory synchronization.	Admins can focus on registering new Domino app (or mail) users when Active Directory is the single source of truth for authentication.
<b>Lower the cost of storing employee mail attachments.</b>	Push your DAOS objects to AWS S3-compliant two-tier cloud storage and realize important cost savings.	Automatically cut costs by up to 80% when you implement policies to move old objects to AWS's "glacial storage."
<b>Insightful Domino server performance monitoring.</b>	Our new partnership with Panopta now makes it easy to identify the right action (every time) to accelerate problem-resolution and keep your servers running.	Admins get alerts about their server performance and dashboards to aid in faster issue detection, diagnosis, and resolution.
<b>NEW MAIL EXPERIENCES</b>		
<b>Streamlined v11 mail experience.</b>	Updated templates mean faster navigation with fewer clicks; organized notifications keep you focused.	Save time as Notes v11 only reveals the things you use the most in mail, calendar and contacts, until you need those extra options.
<b>One meeting, eight people, three companies. No problem.</b>	Approved Contact and OnTime partnerships now mean you can find the right time for a meeting (every time) without unnecessary emails and phone calls.	Fully compatible with HCL Notes, HCL Verse On-Premises, Microsoft Outlook, G-Suite, and Microsoft O365.
